SOFTWARE DEVELOPMENT

I develop open-source software on **github**. My interest rests on tools which help to investigate geometries relevant to string theory. This includes *toric geometry*, for which I have written a collection of packages https://github.com/homalg-project/ToricVarieties_project. This includes the *gap-4* package *QSMExplorer*, which is currently under heavy development to reflect and extend recent insights into a class of string theory solutions known as the **Quadrillion Standard Models**. I have also contributed to https://github.com/homalg-project/CAP_project and <https://github.com/oscar-system/Oscar.jl>. My programming experience includes the languages **gap**, **python**, **julia**, **C++**. For more details please visit my **GitHub-profile** <https://github.com/HereAround> or my **website** <https://martinbies.github.io/>.
